(1) The reduction from 4 to 2 tapes (one for each side) combined with no side panels in the front, simplifies the application, by reducing the application steps from 8 to 4 compared to a traditional slip with 4 side panels and 4 tapes. Additionally, due to the elasticated side panels, there is less adjustment needed. (2) Laboratory report about ergonomic evaluation of MoliCare® variants A+B incontinence products. Research conducted between 5-8 October 2015 in Dijon, France. W. Schneider, H. Mutschler, R. Haller, C. le Mathe. Comparison with a slip having 4 side panels and 4 tapes
